

Add Adobe Flash to Firefox on Fedora 17

Finnbarr P. Murphy

(*fpm@fpmurphy.com*)

So you want to get Adobe Flash working on Firefox in Fedora 17? Here is a quick guide to doing it. Obviously you need root privileges to install the packages.

First you need to install the appropriate repository (32-bit or 64-bit) for the Adobe RPM packages:

```
# Adobe 32-bit x86 repository
rpm -ivh http://linuxdownload.adobe.com/adobe-release/adobe-release-i386-1.0-1.noarch.rpm
rpm --import /etc/pki/rpm-gpg/RPM-GPG-KEY-adobe-linux

# Adobe 64-bit x86_64 repository
rpm -ivh http://linuxdownload.adobe.com/adobe-release/adobe-release-x86_64-1.0-1.noarch.rpm
rpm --import /etc/pki/rpm-gpg/RPM-GPG-KEY-adobe-linux
```

If you cannot download these RPMs, check at [Adobe](#) for the latest version and download that.

Then run `yum` to install the following packages:

```
yum check-update
yum install flash-plugin nspluginwrapper alsa-plugins-pulseaudio libcurl
```

That is it. Restart Firefox and Adobe Flash should be working.
